

# Lake Metonga Association

---

## Lake Metonga Water Level

At the annual meeting a question was asked if the lake level could be lowered, just before freeze over, to possibly preserve some shoreline from the ice shove.

Members of the association board contacted Forest County, and we were informed that it would be virtually impossible as the dam is stationary.

A similar question was asked a few years ago, but it was directed at keeping the level up in the fall as some shoreline is shallow and property owners were having a difficult time getting their boats off lifts. At that time, we were informed that the dam is under the discretion of the EPA and it would have to meet 100% approval by all riparian owners before they would even consider it.

It appears that any changes to the dam are not in the foreseeable future.
